Art Unit: 2183

1. Claims 1-37 are presented for examination.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-37 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Zaida et al. (Patent No. 6,016,540).
4. Applicants' claims so mirror the actions and design of Zaida that applicants seem to have been unaware of the earlier patent. When the examiner reviews applicants' specification there do seem to be potential differences between the two inventions, but applicants' broad claim language does not make such differences clear. For example, circuitry, which performs the claimed functions of the checker, dependency unit, and granting unit of claim 30, is an inherent part of virtually any superscalar processor that has come across this examiner's desk in recent years. Applicants should clearly consider sharpening the focus of their claim language.
5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
6. Claims 21 and 28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
7. In claim 21 applicants seem to have omitted one or more words rendering their language unclear. In claim 28, line 2, the word, "instructions," should probably be in the singular form.

Art Unit: 2183

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

9. Scheaffer et al. (Patent No. 5,710,902).
